

Shot Alarm is an automated gunshot detection and alert system that triggers a call for emergency assistance in seconds.

### Who will Benefit?

Red Alertt is ideal for:

- Schools
- Churches
- Government Buildings
- Restaurants
- Banks
- Shopping Malls
- Emergency Trainings
- Airports
- Factories
- Clinics
- Hospitals

Depending on your needs, Shot Alarm can be programmed to trigger a silent alarm to emergency responders or to set off an audible alarm that makes others in the facility instantly aware of danger. This allows everyone to move into implementation of their prearranged response plan.

**"RESPONSE TIME  
IS THE KEY"**

Nation's first gunshot alarm  
system designed with  
schools in mind.

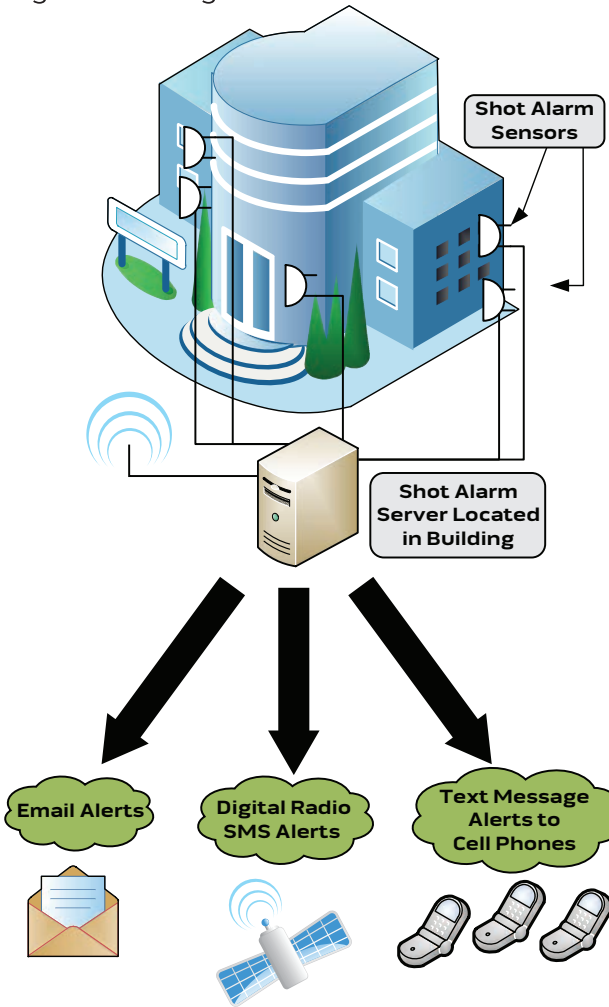

**Red Alertt, LLC** has developed a sophisticated software system that detects the audio signature of a gunshot within the interior of a building. Once the software, Shot Alarm, detects a gunshot, it automatically sends a message to preselected emergency response team members. Information contained in the message will include the exact time of the occurrence, whether multiple shots were fired, and the location of the shots within the building. The message will be sent via text message, email, instant messenger and/or other communication devices. Shot Alarm filters out sounds similar to gunshots such as thunder, breaking glass or other false positives. It is a fully automated system that requires no human interaction once set up is complete.

### How It Works

Red Alertt's Shot Alarm is a multi-channel and real-time audio analysis system that was developed to recognize the audio signature of a gunshot.

Shot Alarm is fully automated and requires NO human interaction to notify police and emergency responders.

Shot Alarm is tailorable, allowing for support to existing emergency plans or whole scale automation.

### Features of Shot Alarm

- Immediate communication with police and other response team members
- Accurate location identification
- Fully automated with power outage back up
- Stand alone system
- 24/7 gunshot detection

### Facility Implementation

- Customized to your facility
- No need for dedicated staff
- Professional installation
- Easy set up and implementation
- Affordable
